

XTremely easy  
XTremely reliable

**Draeger Interlock® XT**  
Information for Interlock Participants

# Draeger Interlock<sup>®</sup> XT Gets You Moving Faster

The XT was specifically designed to be easy to use — so you can spend more time driving and less time interacting with the device.

## **WORKS IN EXTREME TEMPERATURES**

Unlike other devices that need to be detached from your car in extreme heat or cold, the Interlock XT can be safely left in your car in temperatures as high as 185° or as low as -40° Fahrenheit.

## **SIMPLE BREATHING TECHNIQUE**

The Interlock XT requires a very simple “blow and suck” technique that can have you on your way in under 10 seconds. Other devices may require you to breathe or hum in complex patterns.

## **USER GUIDANCE**

Through full text messages on the display, the XT will give you step-by-step instructions on how to provide a correct breath sample. It will also give you advance notice of your next service appointment.

Scan for more  
information.

### INSTALLED ON ANY VEHICLE

Dräger can install the Interlock XT on any type of motor vehicle, including motorcycles.\*

### SUPERIOR SERVICE

Dräger has a nationwide network of service centers that can install and service the XT, plus a service hotline and website to answer your questions 24/7. In addition, we are one of only a few companies that provide roadside assistance and offer a remote unlocking system, if state approved, to help you avoid towing fees.

### CAMERA OPTION AVAILABLE

If your state or county requires that breath tests be recorded on camera, one can be added to the Interlock XT.

\*Depending on state regulations.

#### **REQUIRED INFORMATION TO SCHEDULE INSTALLATION**

- Current contact information
- Date of birth
- Driver's license number
- Vehicle type
- Owner information
- Required date of installation
- Agency requesting installation
- Agent who receives the reports

### **WHAT IS THE INTERLOCK XT?**

The Interlock XT is a breath alcohol measuring device with a vehicle immobilizer that is extremely easy to use and extremely reliable. Like other ignition interlocks, the XT only allows your vehicle to start if your breath alcohol test result is below a regulated preset limit.

### **IS THE INTERLOCK MONITORED?**

Yes, the interlock system records information such as dates, times, test results, engine runs, and engine stops. This data is provided to designated authorities as required by your interlock program. Typically, the ignition interlock is monitored and calibrated at one of our nationwide service centers every 30 to 60 days.

### **WHAT SHOULD YOU EXPECT AT YOUR APPOINTMENT?**

Installation needs to be scheduled by appointment. A typical installation takes one to one and a half hours, but can take longer on some vehicles. At the installation appointment, you will need to complete the administrative paperwork, including the contract and lease agreement. You will also schedule your next monitoring check and calibration appointment. The service technician will give you a user manual in English or Spanish, teach you how to use the Interlock XT, and answer any questions you may have about the device.
